

Five surprisingly simple ways to optimise your diet

【BBC科普精选：五种出乎意料却非常简单的饮食好习惯】

Summary: When it comes to dietary advice, confusion is common due to overwhelming information. This video offers five evidence-based tips: controlling glucose spikes through food sequencing, understanding why calorie counting is misleading, nurturing gut microbiome diversity, limiting ultra-processed foods, and exploring personalized nutrition. The core message emphasizes choosing natural foods and meal timing over restrictive diets.

摘要：面对海量饮食建议，人们常感到困惑。本视频提出五个科学验证的实用技巧：通过调整进食顺序控制血糖波动，揭示卡路里计算的局限性，培育多样化肠道菌群，减少超加工食品摄入，并展望个性化营养趋势。核心在于选择天然食材并重视进食时机，而非盲目节食。

🎵 When it comes to what you eat, there's no shortage of advice.

关于该吃什么，建议从来不#缺#。

🎵 Tiktok is overflowing with it.

Tiktok上更是充斥着各种饮食建议。

🎵 A low carb diet, raw food, cabbage soup, cucumber bagel diet and on and on.

低碳水饮食、生食、#卷心菜#汤、#黄瓜#贝果饮食等等层出不穷。

▶ If you confuse, it's no wonder.

如果你感到困惑，那一点也不奇怪。

▶ So here's five simple tips you can trust for healthy eating.

以下是五个值得信赖的健康饮食简单建议。

▶ OK, this one's a bit of a game changer.

好了，第一条可能颠覆你的认知。

 00:00:28

▶ It's not just what you eat, but when?

不仅要关注吃什么，还要关注进食时间？

▶ If you eat a treat, say a slice of chocolate cake, it's much better to eat it after a meal than on its own.

如果要吃零食（比如一块巧克力蛋糕），餐后食用远比空腹食用更好。

▶ Why?

为什么？

▶ It's all about keeping glucose spikes under control.

关键在于控制血糖峰值。

▶ Whenever you eat carbs or sweet things, the level of glucose in your blood rises.

摄入碳水化合物或甜食时，血糖水平就会升高。

▶ If it rises very quickly and sharply, it will be followed by a crash.

若血糖急剧飙升，随后就会骤降。

 00:00:53

▶ And that crash makes you feel tired, irritable and hungry again.

这种骤降会让你感到疲倦、#易怒#并再次饥饿。

▶ But there are ways to keep these spikes under control.

但确有方法能控制这些血糖峰值。

▶ Exercising after you eat is one.

餐后运动是其一。

▶ Eating food higher in fibre, like vegetables or porridge oats is another.

食用高#纤维#食物（如蔬菜或燕麦粥）是其二。

▶ But the order you eat your food matters too.

进食顺序也很重要。

▶ If you're having some in carb heavy, like white rice or pasta, eating fat protein or vegetables before, flattens the glucose curve.

若食用白米饭或#意大利面#等高碳水食物，先摄入脂肪蛋白或蔬菜能平缓血糖曲线。

 00:01:19

▶ A little bit of fish meat, broccoli and egg, anything like that would do.

少量鱼肉、#西兰花#和鸡蛋等食物均可生效。

▶ That's because having something in a stomach first slows down how quickly the carbohydrates reach the small intestine for digestion.

因为胃中先有食物会延缓碳水化合物进入小肠消化的速度。

▶ And it's the same for that slice of chocolate cake.

这个原则同样适用于那块巧克力蛋糕。

▶ Calorie counting is not very useful.

计算#卡路里#并不太实用。

▶ Why?

为何？

▶ Well, for a start, it's notoriously hard to do.

首先，这种方法#众所周知#难以精确执行。

 00:01:43

▶ Most people underestimate their calorie intake by about 25%.

大多数人会#低估#约25%的#卡路里##摄入量#。

▶ But also because not all calories behave in the same way once inside your body.

更因为不同卡路里在人体内的代谢方式并不相同。

▶ Food in the natural state, like nuts, fruit, vegetables and fish, or anything that's not being processed, require more energy from the body to digest them.

天然状态的食物（如坚果、水果、蔬菜和鱼类）或未经加工的食品，需要身体消耗更多能量进行消化。

▶ This is called the thermic effect of food.

这被称为食物热效应。

 00:02:05

▶ And it means that things like nuts which are high in calories can still be a healthy option, as the body uses so much energy digest in them.

意味着像坚果这类高热量食物仍是健康选择，因为身体会消耗大量能量消化它们。

▶ Give me a gut microbiome some love.

关爱好你的#肠道#微生物组。

▶ In recent years, scientists have begun to understand the importance of what's known as the gut microbiome.

近年来，科学家逐渐认识到所谓#肠道#微生物组的重要性。

▶ The gut microbiome is everything in the digestive tract.

#肠道#微生物组是#消化##道#中的所有微生物集合。

 00:02:29

▶ It's a huge ecosystem that contains trillions of bacteria, fungi, viruses and cells, and it can weigh as much as two kilos.

这是一个巨大的#生态系统#，包含数万亿细菌、真菌、病毒和细胞，总重量可达两公斤。

▶ Research suggests the makeup of your gut microbiome could have really profound effects on your physical health and potentially on your mental health too.

研究表明，肠道微生物组的#构成#可能对身体健康产生#深远#影响，甚至可能影响心理健康。

▶ For a healthy microbiome and a healthy you, you should aim to eat a wide range of different foods, seeds, fruit, vegetables, the yogurt drink, kefir and other fermented foods are particularly gut friendly.

为保持微生物组健康与自身健康，应广泛摄入不同食物：种子、水果、蔬菜、酸奶饮品、开菲尔等发酵食品尤其有益肠道。

 00:03:02

▶ Limit ultra-process foods.

限制超加工食品摄入。

▶ In the UK, 57% of calories we eat come from ultra-process foods and this figure is even higher for children.

在英国，我们摄入的57%卡路里来自超加工食品，儿童的这个比例更高。

▶ Ultra-process foods include, as you might expect, things like pizza, red e-meals, biscuits, but also some quite surprising things which tend to be thought of as healthy, like most supermarket breads, many breakfast cereals, and many milk and meat substitutes.

超加工食品不仅包含披萨、速食餐、饼干等预期中的食物，还包含多数超市面包、许多早餐麦片及奶肉替代品等常被认为健康却令人意外的食品。

 00:03:29

▶ UPF are not labelled, but a good rule of thumb is to look for ingredients you don't recognise.

超加工食品虽无明确标识，但可遵循简易原则：警惕配料表中无法#识别#的成分。

▶ Things you'd never have in your own kitchen.

那些绝不会出现自家厨房的成分。

▶ Like a mulls of fires, sweeteners, colourings and preservatives.

例如复合添加剂、甜味剂、色素和防腐剂。

▶ Personalised nutrition could be the future.

个性化#营养#可能是未来趋势。

▶ Another approach that's on the rise at the moment is that of personalised nutrition.

当前另一种兴起的方法是个性化#营养#。

 00:03:54

▶ And in 2014, two scientists, Erin Segal and Erin Elinath, found some really surprising results from an experiment.

2014年，科学家埃兰·西格尔和埃兰·埃利纳特通过实验发现了惊人现象。

▶ The blood glucose levels in their sample group varied widely after people ate the same food.

摄入相同食物后，样本组的血糖水平存在显著差异。

▶ The explanation?

如何解释？

▶ Well, it could be back to the makeup of our unique gut microbiomes.

这可能归结于每个人独特肠道微生物组的#构成#。

▶ The dream of personalised nutrition is that people would be able to tailor their food choices to the specific needs of their bodies.

个性化#营养#的愿景是让人们能根据身体特定需求#量身定制#饮食选择。

 00:04:24

▶ But nutritionists are keen to point out that some key messages still apply across the board.

但营养学家强调，某些核心建议仍具有普适性。

▶ So for a healthy diet, aim for foods which are close to their natural state.

因此健康饮食应选择接近天然状态的食物：

▶ And orange instead of orange juice, brown rice instead of white rice, dark chocolate instead of milk chocolate.

用完整橙子替代橙汁，用糙米替代白米，用黑巧克力替代牛奶巧克力。

▶ Aim for a wide variety of foods.

追求饮食多样性。

▶ Try not to eat too many ingredients who don't recognise.

尽量少食用含不可识别成分的食品。

 00:04:49

▶ And remember, you are what you eat, but when you eat matters too.

请记住：人如其食，而进食时间同样重要。
