

剑桥雅思11 | 听力真题 Test 1 Section 4 | Ocean Biodiversity Hotspots: Key to Marine Conservation

【剑桥雅思11 | 听力真题 Test 1 Section 4 | 海洋生态密码：揭秘生物多样性热点 | 鲨鱼栖息之谜 | 北极冰层下的新物种】

Summary: Scientists have identified biodiversity hotspots in oceans, crucial for conservation efforts. Researchers found these areas support large predators due to warm surface temperatures and oxygen levels. Marine mammal hotspots exist at ocean current boundaries, rich in plankton. Surprising discoveries include Arctic species under thick ice and octopuses near underwater volcanoes. Global initiatives aim to assess 20,000 endangered species and create protected migration corridors.

摘要：科学家发现海洋生物多样性热点对保护工作至关重要。研究表明，温暖的表层水温和充足氧气是大型掠食者生存的关键。海洋哺乳动物热点集中在洋流边界，那里富含浮游生物。令人惊讶的是，北极厚冰层下发现了新物种，火山附近还栖息着章鱼。全球计划拟评估2万种濒危物种，并建立保护性迁徙走廊。

🎧 Section 4 You will hear part of a student presentation about the variety of different species that live in the world's oceans.

第四部分 你将听到一个学生关于生活在世界海洋中的不同物种多样性的演讲。

🎧 First, you have some time to look at questions 31 to 40.

首先，你有时间看一下第31至40题。

🎧 Now listen carefully and answer questions 31 to 40.

现在请仔细听并回答第31至40题。

🎧 I've been looking at ocean biodiversity, that's the diversity of species that live in the world's oceans.

我一直在研究海洋生物多样性，即生活在世界海洋中的物种多样性。

 00:01:32

🎧 About 20 years ago, biologists developed the idea of what they called biodiversity hotspots.

大约20年前，生物学家提出了他们所称的生物多样性热点地区的概念。

🎧 These are the areas which have the greatest mixture of species.

这些是物种混合最丰富的区域。

🎧 So one example is the ocean.

其中一个例子就是海洋。

🎧 These hotspots are significant because they allow us to locate key areas for focusing efforts at conservation.

这些热点地区很重要，因为它们使我们能够确定保护工作的关键区域。

🎧 Biologists can identify hotspots on land fairly easily, but until recently very little was known about species distribution and diversity in the oceans, and no one even knew the ocean.

生物学家可以相对容易地识别陆地上的热点地区，但直到最近，人们对海洋中的物种分布和多样性知之甚少，甚至没有人了解海洋。

 00:02:02

🎧 Then a Canadian biologist called Boris Worm did some research in 2005 on data on ocean species that he got from the fishing industry.

然后，一位名叫鲍里斯·沃姆的加拿大生物学家在2005年利用从渔业获得的数据对海洋物种进行了一些研究。

🎧 And he was a very famous scientist, a scientist who was a scientist, and he was a scientist, and he was a scientist.

他是一位非常著名的科学家，一位科学家，一位科学家，一位科学家。

▶ Then a Canadian biologist called Boris Worm did some research in 2005 on data on ocean species that he got from the fishing industry.

然后，一位名叫鲍里斯·沃姆的加拿大生物学家在2005年利用从渔业获得的数据对海洋物种进行了一些研究。

 00:02:32

▶ Worm located five hotspots for large ocean predators like sharks and looked at what they had in common.

沃姆确定了五个大型海洋捕食者（如鲨鱼）的热点地区，并研究了它们的共同点。

▶ The main thing he'd expected to find was that they had very high concentrations of food, but to his surprise that was only true for four of the hotspots.

他原本预期的主要发现是这些地区食物浓度非常高，但令他惊讶的是，这仅适用于其中四个热点地区。

▶ The remaining hotspot was quite badly off in that regard.

剩下的一个热点地区在这方面相当匮乏。

 00:02:55

▶ But what he did find was that in all cases the water at the surface of the ocean had relatively high temperatures, even when it was cool at greater depths.

但他确实发现，在所有情况下，海洋表层的水温相对较高，即使在较深的地方较冷。

▶ So this seemed to be a factor in supporting a diverse range of these large predators.

因此，这似乎是支持这些大型捕食者多样性的一个因素。

▶ However, this wasn't enough on its own because you also found that the water needed to have enough oxygen in it.

然而，这本身还不够，因为你还发现水中需要有足够的氧气。

 00:03:21

▶ So these two factors seemed necessary to support the high metabolic rate of these large fish.

因此，这两个因素似乎是支持这些大型鱼类高代谢率所必需的。

▶ A couple of years later, in 2007, a researcher called Lisa Balance, who was working in California, also started looking for ocean hotspots, but not for fish.

几年后，2007年，一位在加州工作的研究员丽莎·巴兰斯也开始寻找海洋热点地区，但不是针对鱼类。

▶ What she was interested in was marine mammals, things like seals.

她感兴趣的是海洋哺乳动物，比如海豹。

 00:03:46

▶ And she found three places in the oceans which were hotspots, and what these had in common was that these hotspots were all located at boundaries between ocean currents.

她发现了海洋中的三个热点地区，它们的共同点是这些热点都位于洋流的边界。

▶ And this seems to be the sort of place that has lots of the plankton that some of these species feed on.

这似乎是那些拥有大量浮游生物的地方，而这些物种以浮游生物为食。

▶ So now people who want to protect the species that are endangered need to get as much information as possible.

因此，现在想要保护濒危物种的人们需要尽可能多地获取信息。

 00:04:12

▶ For example, there's an international project called the Census of Marine Life.

例如，有一个名为“海洋生物普查”的国际项目。

▶ They've been surveying oceans all over the world, including the Arctic.

他们一直在调查世界各地的海洋，包括北极。

▶ One thing they found there, which stunned other researchers, was that there were large numbers of species which lived below the ice.

他们在那里发现的一件事让其他研究人员感到震惊，那就是有大量物种生活在冰层之下。

▶ Sometimes under a layer up to 20 meters thick.

有时是在厚达20米的冰层之下。

 00:04:35

▶ Some of these species had never been seen before.

其中一些物种以前从未被发现过。

▶ They've even found species of octopus living in these conditions.

他们甚至发现了在这些条件下生活的章鱼物种。

▶ And other scientists working on the same project, but researching very different habitats on the ocean floor, have found large numbers of species congregating around volcanoes, attracted to them by the warmth and nutrients there.

其他参与同一项目但研究海底不同栖息地的科学家发现，大量物种聚集在火山周围，被那里的温暖和营养物质吸引。

 00:05:03

▶ However, biologists still don't know how serious the threat to their survival is for each individual species.

然而，生物学家仍然不知道每个物种面临的生存威胁有多严重。

▶ So a body called the Global Marine Species Assessment is now creating a list of endangered species on land, so they consider things like the size of the population, how many members of one species there are in a particular place.

因此，一个名为“全球海洋物种评估”的机构正在编制一份陆地上的濒危物种名单，他们考虑的因素包括种群规模、某一特定地点某一物种的数量。

▶ And then they look at their distribution in geographical terms.

然后，他们从地理角度研究它们的分布。

 00:05:35

▶ Although this is quite difficult when you're looking at fish, because they're so mobile.

尽管这在研究鱼类时相当困难，因为它们的流动性很强。

▶ And then thirdly, they calculate the rate at which the decline of the species is happening.

第三，他们计算物种衰退的速度。

▶ So far, only 1,500 species have been assessed, but they want to increase this figure to 20,000.

到目前为止，仅评估了1,500个物种，但他们希望将这个数字增加到20,000。

▶ For each one they assess, they use the data they collect on that species to produce a map showing its distribution.

对于他们评估的每一个物种，他们利用收集到的数据制作一张显示其分布的地图。

 00:06:05

⌂ Ultimately, they will be able to use these to figure out not only where most species are located, but also where they are most threatened.

最终，他们将能够利用这些数据不仅确定大多数物种的位置，还能确定它们在哪里受到最大威胁。

⌂ So finally, what can be done to retain the diversity of species in the world's oceans?

那么，最后，我们能做些什么来保持世界海洋中的物种多样性呢？

⌂ Firstly, we need to set up more reserves in our oceans, places where marine species are protected.

首先，我们需要在海洋中建立更多的保护区，即保护海洋物种的地方。

 00:06:29

⌂ We have some, but not enough.

我们有一些，但还不够。

⌂ In addition, to preserve species such as leatherback turtles, which live out in the high seas, but have their nesting sites on the American coast, we need to create corridors for migration, so they can get from one area to another safely.

此外，为了保护像棱皮龟这样的物种（它们生活在公海，但在美洲海岸筑巢），我们需要建立迁徙走廊，以便它们能够安全地从一处迁移到另一处。

⌂ As well as this, action needs to be taken to lower the levels of fishing quotas to prevent overfishing of endangered species.

除此之外，还需要采取措施降低捕捞配额，以防止对濒危物种的过度捕捞。

 00:06:59

⌂ And finally, there's the problem of bycatch.

最后，还有副渔获物的问题。

⌂ This refers to the catching of unwanted fish by fishing boats, their return to the sea, but they're often dead or dying.

这指的是渔船捕获不需要的鱼并将其放回海中，但它们往往已经死亡或濒临死亡。

▶ If these commercial fishing boats used equipment, which was more selective, so that only the fish wanted for consumption were caught, this problem could be overcome.

如果这些商业渔船使用更具选择性的设备，只捕获供食用的鱼类，这个问题就可以得到解决。

bilibili 00:07:24

▶ Okay, so does anyone have any questions?

好的，那么有人有什么问题吗？

▶ That is the end of section 4.

这是第四部分的结束。

▶ You now have half a minute to check your answers.

你现在有半分钟的时间检查你的答案。

▶ 1. 05. 1. 1. 2. 2. 2. 3. 05. 1. 3. 05. 05. 1. 1. 1. 2. 06. A curious man to answer your questions.

1. 一个好奇的人来回答你的问题。

▶ You may as well have always answered your questions, but I'm graduation at this time.

你可能已经回答过你的问题，但我现在毕业了。

bilibili 00:08:06

▶ I'm more familiar yet.

我更熟悉了。

▶ SCOUNT is complete. of the listening test.

SCOUNT 完成。听力测试结束。

▶ You now have 10 minutes to transfer your answers to the answer sheet.

你现在有10分钟的时间将答案誊写到答题卡上。

▶ Please stop writing and wait for your question booklet to be collected.

请停止书写，等待收卷。
